

Yu-Hsuan(Sherry) Huang

Philadelphia, PA | sherryyh Huang@gmail.com | (984)-259-4871 | <https://github.com/sherryfish321> | <https://www.linkedin.com/in/sherry-yh-huang/>

EDUCATION

University of Pennsylvania	08/2025 - 06/2027
Master of Applied Science in Computer Science	Philadelphia, PA
Coursework: Introduction to Software Development, Introduction to Computer Systems, Mathematical Foundations of Computer Science, Big Data Analytics, Data Structures and Software Design, Computer Systems Programming, Algorithms and Computation	

WORK EXPERIENCE

Crustdata	05/2026 – 07/2026
AI Engineer Intern	New York, NY
- Built Python-based data enrichment and validation pipelines processing 1,000+ LinkedIn profiles per batch, integrating third-party REST APIs and MCP tooling to evaluate profile resolution, contact fill-rate, coverage, and data-quality metrics across customer datasets. - Designed reusable AI agent workflows and prompt templates on internal MCP servers to automate company research, sourcing, and enrichment QA, converting manual GTM research tasks into repeatable LLM-assisted workflows for customer-facing use cases. - Diagnosed retrieval, fuzzy-matching, and search-quality failures in customer-facing workflows by analyzing query logic, error patterns, and validation outputs, restoring valid matches from 0 to 451 and documenting root-cause analysis for future debugging.	

Wang Lab, University of Pennsylvania	12/2025 - Present
AI Research Assistant	Philadelphia, PA
- Built scalable Python pipelines to process large-scale text datasets and support longitudinal evaluation of NLP model outputs across multiple tasks, datasets, and experimental settings. - Developed model evaluation and auditing workflows to analyze consistency, error patterns, output quality, and reproducibility, enabling structured monitoring of AI system behavior.	

EY Advisory Services Inc.	03/2024 - 06/2025
Data Analytics Consultant	Taipei, Taiwan
- Automated KPI dashboards and financial reporting workflows using Power BI, Python, Selenium, and Power Automate, reducing manual reporting effort by 80% and replacing three full-time equivalents of manual data extraction. - Developed end-to-end ETL pipelines in Python and SQL with schema design and data validation for an enterprise retail data platform, reducing data inconsistencies by 70% and supporting analytics across multiple business units. - Built customer behavior models using regression and market basket analysis on transaction data, improving recommendation accuracy by 12% and enabling targeted marketing and product optimization strategies.	

SELECTIVE PROJECTS

Transit Accessibility & Urban Safety Modeling – Python / SQL / Machine Learning	08/2025
- Built classification models using spatial, temporal, and accessibility features to identify high-risk urban locations, applying feature engineering and model evaluation on imbalanced datasets. - Evaluated model performance using F1, recall, and error analysis, improving prediction robustness and interpreting model outputs for urban safety decision-making.	

SKILLS

Programming & Data: Python, SQL, Pandas, NumPy, REST APIs, Data Pipelines, ETL Machine Learning & AI: Scikit-learn, XGBoost, PyTorch, NLP, LLMs, RAG, Embeddings, Feature Engineering, Model Evaluation, Error Analysis Applied AI & Systems: AI Agents, MCP Tooling, Prompt Engineering, Retrieval Systems, Data Validation, Dataset Curation, API Integration Databases & Cloud: PostgreSQL, MongoDB, GCP, AWS, Docker, Git, Linux
