EDUCATION

University of Pennsylvania	08/2025 - 06/2027
M.S. in Computer and Information Technology	Philadelphia, PA
• Coursework: Introduction to Software Development, Introduction to Computer Systems, Mathematical Foundations of Computer Science, Big Data Analytics, Data Structures and Software Design, Computer Systems Programming, Algorithms and Computation	
National Tsing Hua University	08/2020 - 06/2024
B.S. in Economics, GPA: 3.86 / 4.3	Taiwan

WORK EXPERIENCE

Wang Lab, University of Pennsylvania	12/2025 - Present
Research Assistant	
• Engineered scalable NLP data pipelines in Python to process large-scale biomedical literature, implementing structured validation and reproducible preprocessing workflows for genomic research datasets	
• Collaborated with cross-functional researchers to define structured data schemas and ensure consistency across heterogeneous scientific publications	
EY Advisory Services Inc.	03/2024 - 06/2025
Data Analytics Consultant	
• Designed and automated KPI dashboards and financial reporting workflows using Power BI, Python, and Power Automate, reducing manual effort by 80% and enabling real-time revenue tracking and executive decision-making	
• Streamlined data extraction workflows with Selenium-based automation, reducing three full-time equivalents of manual work and ensuring high data accuracy; presented weekly reporting insights to partners and senior managers to guide financial strategies	
Project “Enterprise-Scale Retail Data Integration Platform”	
• Contributed to scalable data services on GCP by consolidating fragmented datasets into a centralized warehouse, improving query performance by 40% and enabling product teams to access reliable metrics for decision-making	
• Assisted in implementing ETL pipelines in Python/SQL with schema design, data governance, and testing, reducing data errors by 70% and ensuring consistent datasets that supported KPI dashboards across departments	
• Applied regression and market basket analysis in BigQuery/Vertex AI to analyze customer purchasing patterns and prototype product and health-oriented recommendations, generating insights that improved accuracy by 12% and increased user engagement	
DFI Inc.	06/2023 - 11/2023
Data Analytics Intern	
• Utilized Google Search Console and Google Analytics to implement SEO strategies, improving keyword rankings and increasing company visibility, which drove a 60% increase in organic website traffic	
• Conducted keyword analysis with Python web scraping, translating insights into data-driven adjustments for campaign targeting	

SELECTIVE PROJECTS

Transit Accessibility & Urban Safety Modeling – Python / SQL / Machine Learning	08/2025
• Built an end-to-end geospatial machine learning pipeline to analyze 150K+ crime incidents and 800+ transit stations, applying coordinate projection and nearest-neighbor spatial matching to generate station-level risk features for predictive modeling	
• Engineered temporal and spatial features and trained classification models, addressing class imbalance with SMOTE to improve high-risk station detection and support data-driven safety prioritization	

SKILLS

• Programming Languages: Python, C/C++, SQL, R, Java, JavaScript, HTML/CSS
• Data Analytics: Power BI, Tableau, Excel, MATLAB, Matplotlib, Power Automate, Google Apps Script, Google Analytics
• Statistics & Machine Learning: Regression, t-test, Chi-squared, Clustering, Predictive Analytics, XGBoost, Scikit-Learn
• Cloud & Technology: Google Cloud Platform (BigQuery, Vertex AI), AWS (QuickSight), GitHub, REST APIs
